The last fifteen years have produced major advances in the mathematical theory of wavelet transforms and their applications to science and engineering. In an effort to inform researchers in mathematics, physics, statistics, computer science, and engineering and to stimulate further research, an NSF-CBMS Research Conference on Wavelet Analysis was organized at the University of Central Florida in May 1998. Many distinguished mathematicians and scientists from all over the world participated in the conference and provided a digest of recent developments, open questions, and unsolved problems in this rapidly growing and important field. As a follow-up project, this monograph was developed from manuscripts submitted by renowned mathematicians and scientists who have made important contributions to the subject of wavelets, wavelet transforms, and time-frequency signal analysis. This publication brings together current developments in the theory and applications of wavelet transforms and in the field of time-frequency signal analysis that are likely to determine fruitful directions for future advanced study and research.

From reader reviews:

Warren Ford:

In this 21st century, people become competitive in each way. By being competitive now, people have to do something to make themselves survive, being in the middle of often the crowded place and noticed by surrounding. One thing that at times many people have underestimated it for a while is reading. Yes, by reading a publication your ability to survive rises then having a chance to endure than others is high. For you who want to start reading the book, we give you this Wavelet Transforms and Time-Frequency Signal Analysis (Applied and Numerical Harmonic Analysis) book as a beginner and daily reading reserve. Why, because this book is usually more than just a book.

David Shetler:

The particular book Wavelet Transforms and Time-Frequency Signal Analysis (Applied and Numerical Harmonic Analysis) will bring someone to the new experience of reading any book. The author's style to spell out the idea is very unique. Should you try to find a new book to read, this book is very ideal for you. The book Wavelet Transforms and Time-Frequency Signal Analysis (Applied and Numerical Harmonic Analysis) is much recommended to you to read. You can also get the e-book from your official web site, so you can more readily read the book.

Linda Carroll:

In this time of globalization it is important for someone to acquire information. The information will make you definitely understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of references to get information, for example: internet, paper, book, and soon. You can see that now, a lot of publishers print many kinds of books. The actual book that I recommended to you is Wavelet Transforms and Time-Frequency Signal Analysis (Applied and Numerical Harmonic Analysis). This e-book consists of a lot of information about the condition of this world now. This book was represented how the world has grown up. The terminology styles that the writer uses to explain it are easy to understand. The actual writer made some investigation when he made this book. That's why this book suited all of you.

Robert Bowser:

As a scholar, I exactly feel bored in order to read. If their teacher asked them to go to the library as well as to make a summary for some book, they are complained. Just minor students that have reading's spirit or real their passion. They just do what the professor wants, like asked to the library. They go to there but nothing reading very seriously. Any students feel that studying is not important, boring in addition to can't see colorful pics on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we would like. Likewise, word says, ways to reach Chinese's country. Therefore, this Wavelet Transforms and Time-Frequency Signal Analysis (Applied and Numerical Harmonic Analysis) can make you really feel more interested to read.
